

STANDARD PACKAGE – EXAMPLE

This package researches two surnames from your chosen starting point and will typically take a line back 2 or 3 generations. In this example, the client chooses his father's and mother's paternal lines as highlighted by the coloured boxes. With this package he could have chosen any alternative two surnames e.g. his mother's male paternal line and his father's female maternal line etc.

This is an illustration only. The Standard package is not limited a fixed number of generations. I'll research as far back as the records allow. So in this example, it may be possible to include the Father's Paternal Great Grandfather and Maternal Great Grandfather or an even earlier generation in those lines.
