This package researches a single surname from your chosen starting point and will typically take a line back 2 or 3 generations. In this example, the client chooses her father's maternal line as highlighted by the coloured boxes. With this package she could have chosen any alternative single surname line e.g. her father's male paternal line, or her mother's female maternal line etc.

This is an illustration only. The Starter package is not limited a fixed number of generations. I'll research as far back as the records allow. So in this example, it may be possible to include Father's Maternal Great Grandmother or an even earlier generation in that line.
